Avions Mauboussin STOL hybrid hydrogen aircraft

By **Press** - 24 November 2020

Avions Mauboussin, an aircraft manufacturer based in Belfort (France) since 2017, is developing the first generation of hybrid hydrogen-fuelled aircraft. The French manufacturer is reviving the legendary aviation brand of the 1930s founded by Pierre Mauboussin, with two programmes: Alérion M1h, a light two-seater, and Alcyon M3c, a six-seater.

The objective is to allow sustainable inter-city mobility and access to areas currently closed to conventional aircraft, using clean and silent short take-off and landing (STOL*) aircraft, to operate as close as possible to the desired destinations and from reduced infrastructures.
